SUMMARY

AI-native product designer with 10+ years in graphic, UX and product design. I own design from scoping and requirements to production-ready frontend, and I design the AI features at the core of the product. My AI-first process puts the pixel-perfect work straight into code, so there's no design-to-frontend handoff. I'm looking for an AI-forward startup where one designer can cover product, design and frontend.

SKILLS

Product & Leadership: Product strategy, product ownership, roadmap & sprint management, requirements writing, team leadership.

Design: Design systems, design thinking, user research, information architecture, Figma, Illustrator, Photoshop, After Effects.

AI & Build: Vibecoding (AI-first design), Claude Code, Cursor, Vercel, HTML/CSS, Storybook.

EXPERIENCE

Senior Product Designer · Workerbase 2023 – Present

- Set up and lead an AI-first design process: wireframes outside of code, final UI built directly in production React. This removed the design-to-frontend handoff and cut feature development time by 20%.
- Rebuilt the cross-platform design system from scratch, replacing a fragmented legacy one with 30+ production-ready components in Storybook, built on shadcn/ui and a custom Tailwind config for desktop and mobile.
- Designed and shipped a checklist builder rolled out in two plants of a global manufacturer, with high adoption and daily use on the factory floor.
- Design the product's AI features (agents, conversational interfaces and AI-assisted workflows) on a multi-LLM platform.
- Only designer on a complex B2B manufacturing platform for 16 enterprise clients, across mobile, tablet and industrial smartwatch.
- Work closely with the PM on scoping and requirements, share product-owner duties and help run sprints for a team of 10 engineers.

Product Designer · Skycastle Studios 2021 – 2023

- Set the product design strategy for multiple products, balancing business goals and user needs.
- Designed and prototyped flows, interfaces and interactions in Figma and Sketch, and built product layouts in HTML and SCSS.

Lead Designer & Culture Specialist · Leafnoise 2017 – 2023

- Led and mentored 3 designers, running design critiques and supporting their growth.
- Set the UX strategy across projects and turned research and user data into design decisions.
- Owned company culture, helping the team take more ownership and making it a better place to work.

Lead Graphic Designer · PB5LAB 2013 – 2017

- Created campaign concepts, key visuals, brand applications and video for clients, and took my first steps into product work.

EDUCATION

MA, Corporate Communications · UADE Business School 2019 – 2020

UX Design · Digital House 2019

Graphic Design · Universidad de Buenos Aires 2011 – 2016
